25X1A

Dear Dick:

You may recall that our original proposal covering the development of System No. 3 did not include provision for engineering a special test set for this system. By mutual agreement between our representatives, development work on such a test set was initiated mid-way through the System 3 development program and has been continuing since that date. Accordingly, we are submitting this proposal covering the costs for development of the System 3 test set with the benefit of a considerable amount of hindsight; it is probable, therefore, that this estimate is a reasonably accurate one. Attached hereto you will find a statement of work to be performed and a cost estimate covering the work required for design, fabrication, testing, and delivery of a prototype of the System 3 test set.

25X1A

A complete breadboard model of this test set has been engineered and fabricated and is now undergoing tests. Design activities for the production unit are well under way, about 65% of the drawings required having been completed at this time. Our present schedule calls for completion of construction of the first production model of the set by 23 July 1956, and it is assumed that all tests necessary on this unit can be completed in time to permit delivery by 30 July 1956. A large fraction of the electronic components and fabricated parts required for the set are already on order, and we shall shortly be in position to provide you with a delivery schedule on the three additional units now on order.

STATEMENT OF WORK

The contractor proposes to supply the following services, equipment and supplies:

1. All engineering, labor, supplies and materials necessary for the fabrication, testing and delivery of a test set suitable for use with special electronic System Number Three and conforming to the description in the accompanying technical exhibit.
2. All engineering, labor, supplies and materials necessary for the preparation of twenty-five (25) copies of an addendum to the instruction manual for System Three, describing the operation and maintenance of the test set.
